Real Time Solution

Monitoring, Vehicle Recovery

iTrackPro LITE

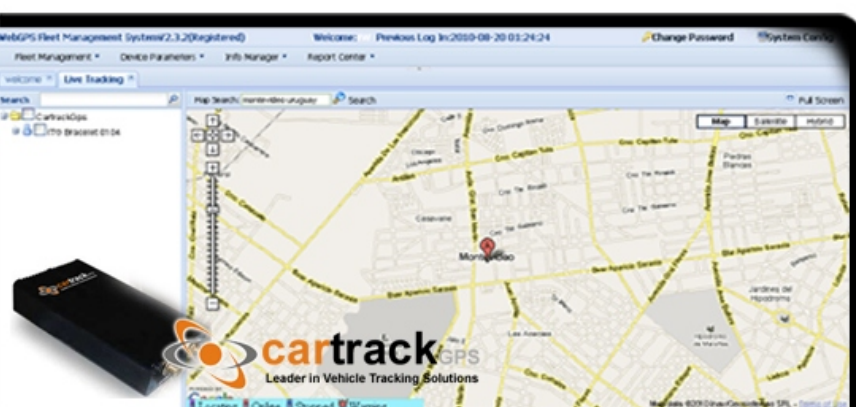

FUNCTIONALITIES

- Personal or Vehicle GPS Location and fleet management.
- Engine and Fuel remote control.
- No cost real time tracking platform
- Worldwide use
- Frequency: GSM 900/1800/1900MHz
- High sensitivity GPS chip, high technology.
- Accurate location even when signal is weak or covered by the surroundings.
- Excellent performance on limited spaces such as narrow streets or high traffic cities.
- Compact and easy hidden installation.
- Low energy consumption.
- Fast GPS Reception.
- SMS and GPRS communication mode.
- Alarms and remote monitoring supported (optional).
- It supports SMS and internet tracking and location.
- Monitoring and location from the vehicle.
- Location from a cellphone through SMS.
- Panic function (SOS, optional).

TECHNICAL DETAILS

- GSM Module : GSM 850 / 900 - 1800 / 1900MHz
- GPS chipset: SIRF3
- GPS Sensitivity: -159dBm
- GPS Frequency: L1, 1575.42MHz
- GPS Precision: 5-25meter
- Speed accuracy: 0.1 meter / second
- Time accuracy: Synchronized for GPS
- Default Datum: WGS-84
- Hot Start: 1second
- Cold Start: 38 seconds
- Max ASL: 18000 meters
- Max Speed: 515 meters/seconds
- Gravitational Acceleration : 4g
- Working Temperature: -20---65°
- Humidity: 5%---95%
- Voltage: 10V—25V
- Power: 10V—25V
- Stand by average current: < 80MA
- LED: LED indicates the GPS, GSM and other working status.
- Alarm Switch: SOS

iTrackPro LITE

OUR PROFILE

We are a company pioneer in GPS system integration and software development for vehicle location worldwide. We have a wide tracking solution range, from 1996, year on which we started manufacturing national level (Uruguay), all kinds of GPS devices for tracking through AMPS and CDPD cellular technology, that was the ones that led the market in that time.

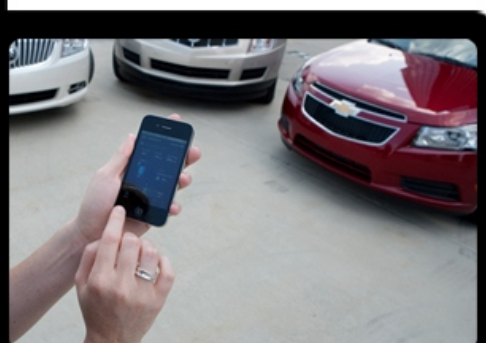

We export tracking solutions to 100 countries, and finally to get the costs lower, we manufacture our own equipments directly in Asia – to which we configure the firmware (the “brain”) totally designed in Uruguay.

This mean that the technology is created 100% by uruguayan technicians, meanwhile manufacturing is done with high qualities norms and more competitive prices - that is the advantage that has hiring the offshore components assembly, as well as to minimize errors and factory failure to 1 thousand rate.

We offer our high qualified and multidisciplinary staff, who are the ones that are in charge of sales and setting up – as we think that those who establish first contact with the client and advice as well, must deepen their relationship and responsibility to client always. This way lasting relationships are established, on which fast response to clients are guaranteed on matters to failure or incompatibility or to possible new accessories integration and adaptation, as well as to create a system according to clients need.

The fact of offering a turnkey solution makes us to improve our service, as we need always to overcome and continue marketing in order to continue within the market. We focus on the prodcut and we dont charge for technical support, this is why we think that we provide a perfectly profitable equation – which provide reliability and minimize monthly costs from our clients.

We are located in the central area from Montevideo, Uruguay, and our worldwide approach has been mainly through internet; until the current date we have sold over than 50.000 units, existing a huge demand in the last years, in regards of the GPS Solutions markets.
